

COLOSSEUM · CRYPTO WORLD'S FAIR · AI / AGENTS

Solarchik Assistant

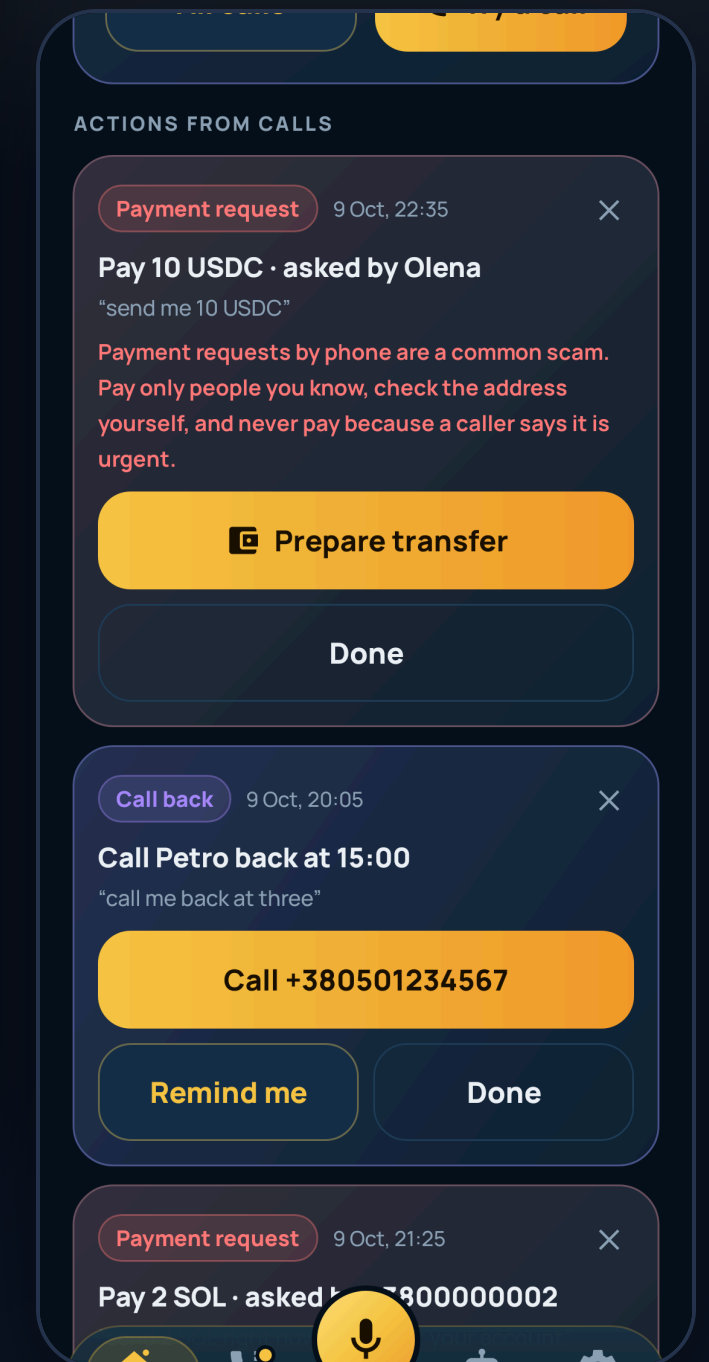

A pocket AI on Android that
picks up when you can't, and does
things on Solana only after I say yes.

Native Kotlin Android · v1.1.3 · Solana mainnet

Vadym Bilobrovets · solo founder · team Solar DePin

Morning briefing + secretary

Actions from calls

THE PROBLEM

I miss calls I need, and pick up calls I don't.

Missed calls

When I'm busy, driving or in a meeting, the call is just gone. Later I don't know who it was or what they wanted.

Spam and scam calls

Unknown numbers, "urgent" requests, people asking to send money. It's on me to filter all of it.

Crypto apps I never open

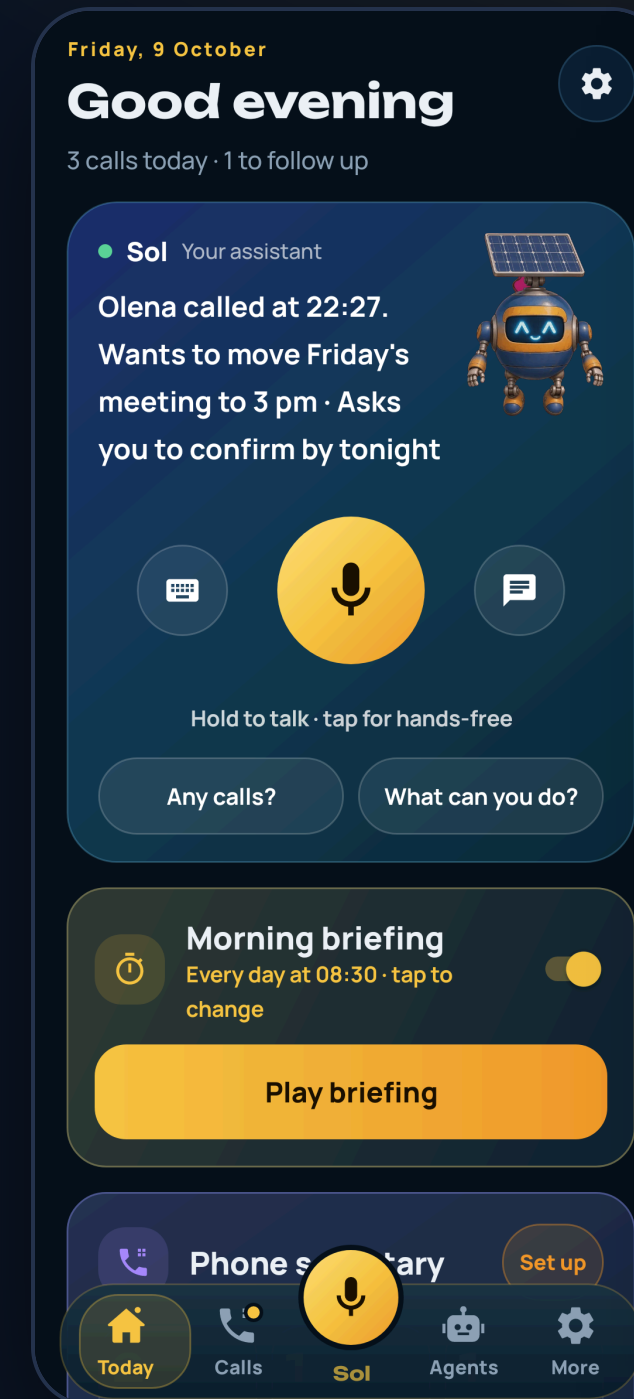

Wallets and dApps sit on the phone as dashboards. There's no daily reason to open them, so I don't.

Most AI apps I tried were one more chat tab. I wanted one helper on the home screen that **answers for me, tells me what to do next**, and can act on Solana when I approve it.

THE SOLUTION

One helper on the home screen

- **AI phone secretary** on a real +380 number: answers, talks to the caller, writes a note and a transcript, blocks spam
- **Call → action cards:** call back, reminder, or a payment request you approve in your wallet
- **Sol**, a voice assistant in English and Ukrainian, plus a **morning voice briefing**
- **Mainnet wallet** via Mobile Wallet Adapter: Seed Vault, Phantom, Solflare
- **Three agents:** Season Agent, Saver, Watcher. All off by default
- Daily on-chain check-in memo, and a small runner game as a habit bonus

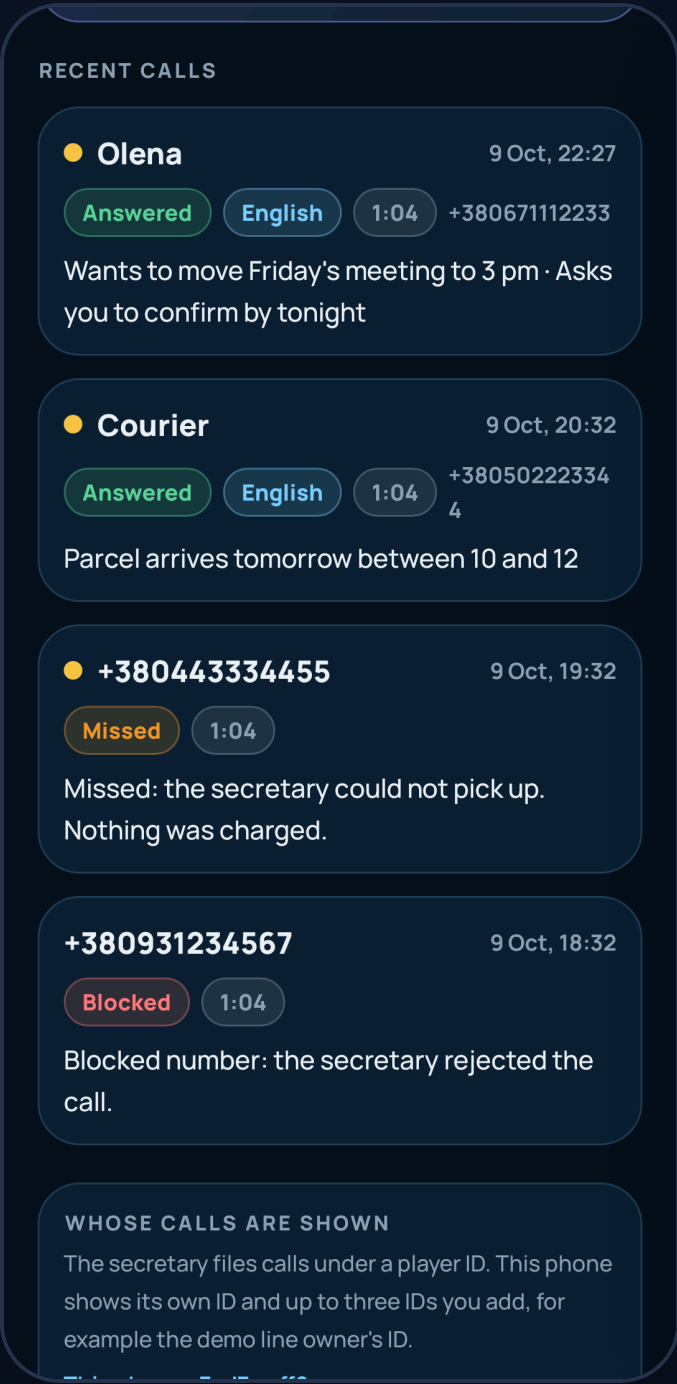

Today with Sol

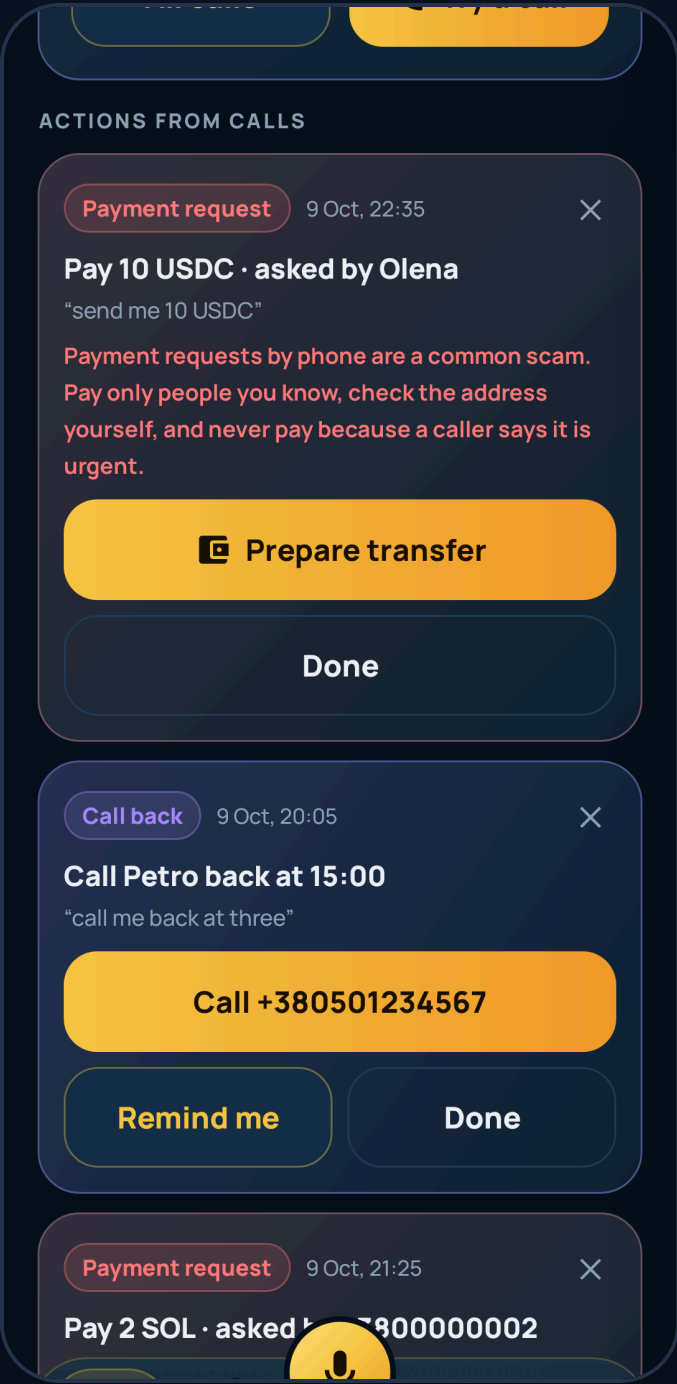

Mainnet wallet card

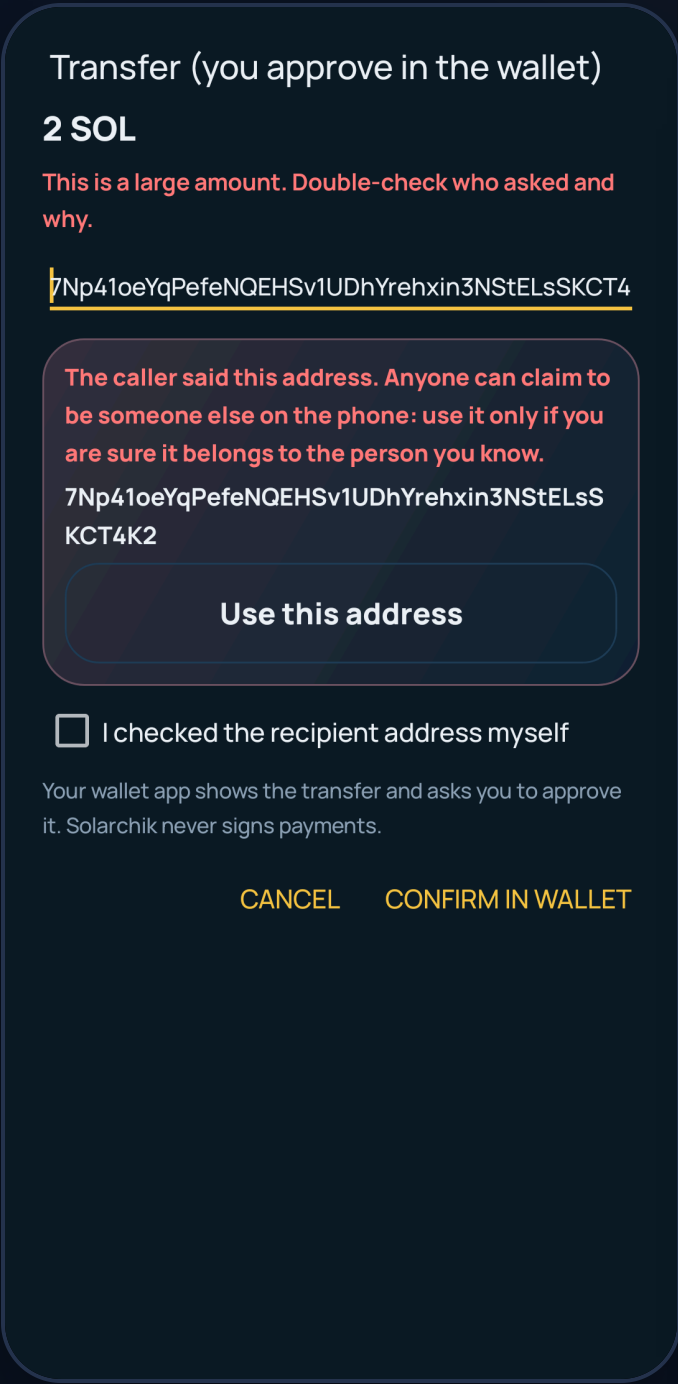

Someone calls. I get a note and a next step.

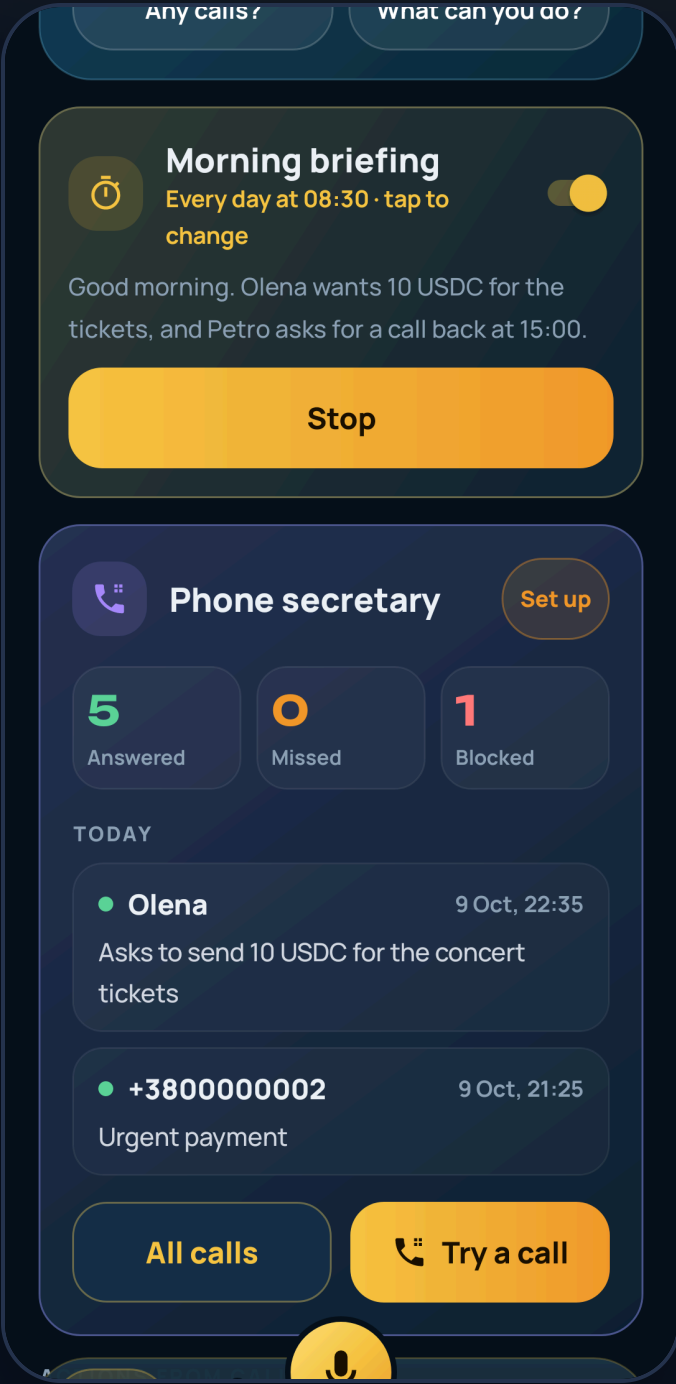

1. Calls inbox
who, why, how urgent

2. Action cards
call back, remind, payment

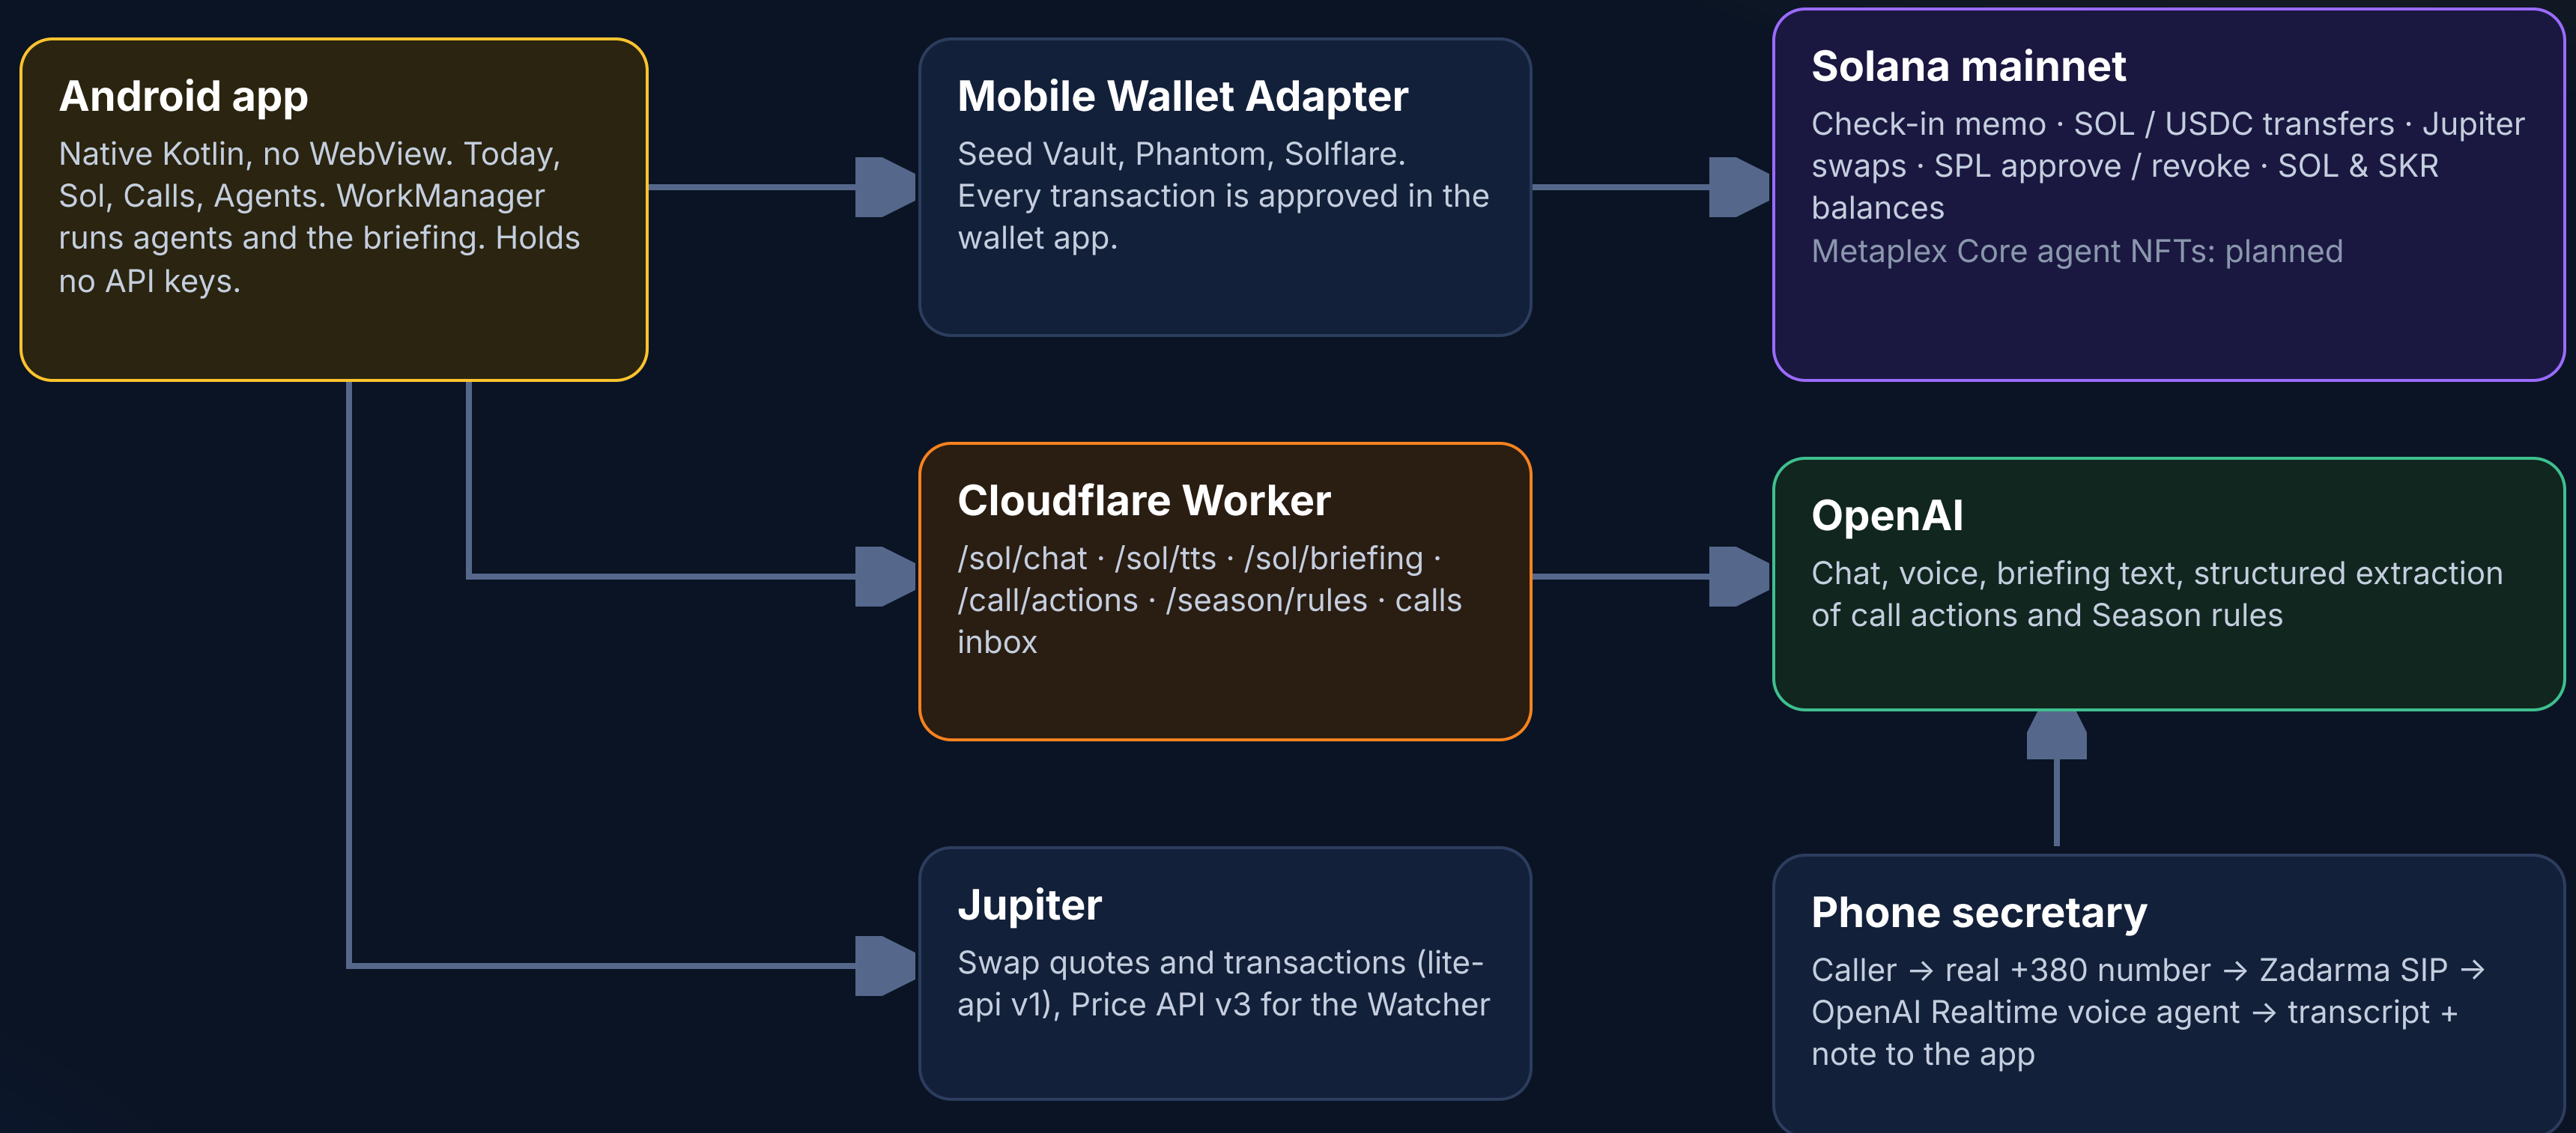

3. Payment sheet
scam warning, I confirm the address

4. Morning briefing
Sol reads my day out loud

HOW IT WORKS

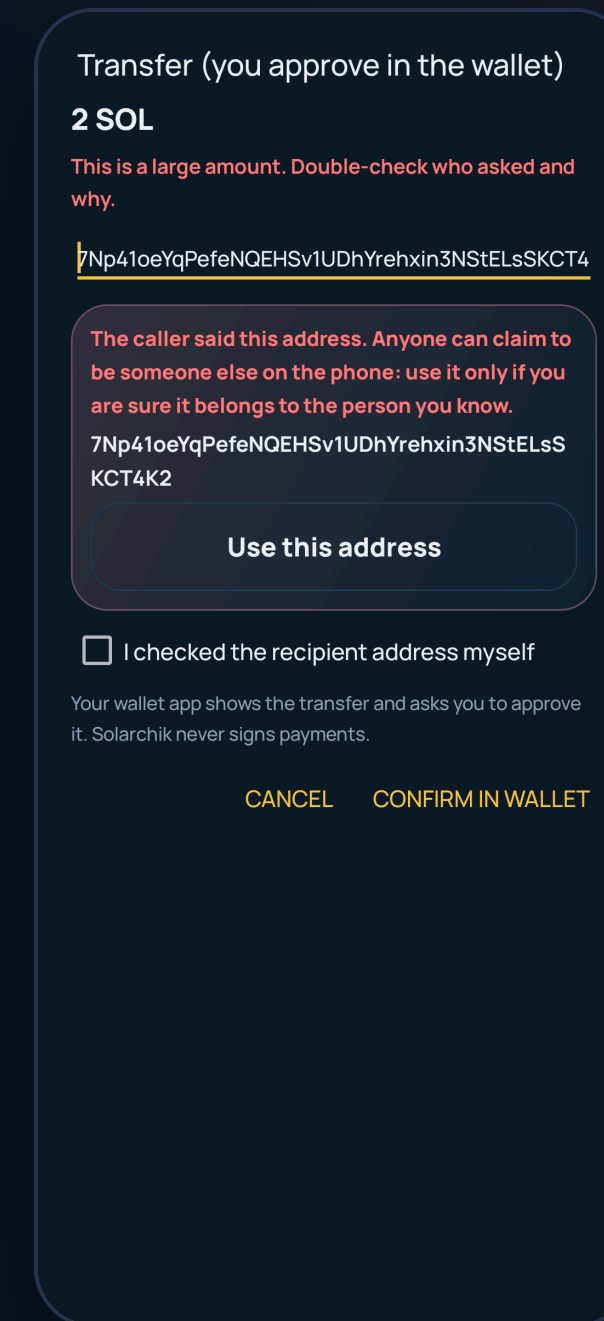

Architecture

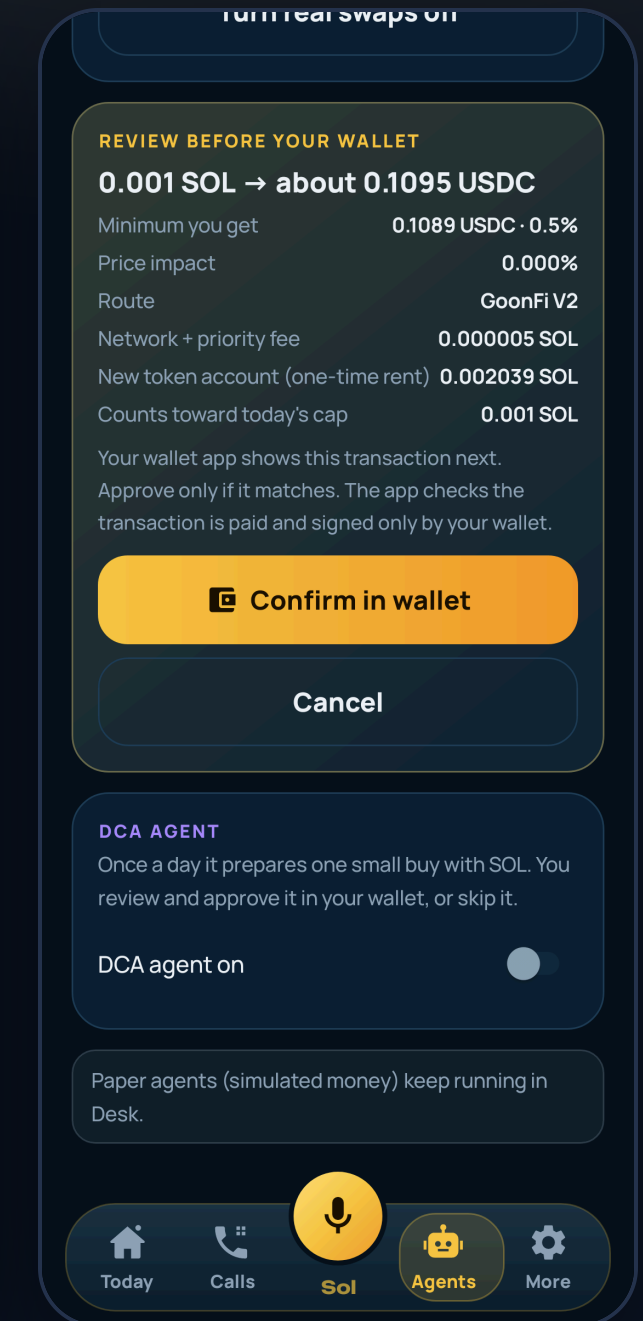

SAFETY

The app never signs for my wallet

- **Every transaction** opens the wallet app. I approve or reject it there. No hot wallet on mainnet.
- **Payments from calls** start with an empty recipient. If the caller said an address, it's shown in a red card with a scam warning, and I tick "I checked the address myself".
- **Swaps are opt-in:** SOL, USDC, SKR, JUP only. 0.05 SOL/day cap by default, 0.5 % slippage, 1 % price-impact limit. Quote and fees before the wallet opens.
- **Agents are off by default.** The Watcher has no transaction code at all.
- **AI calls have a budget** (1.1.3): goodbye at 2:45, hang-up at 3:00, at most 30 AI minutes a day in total.
- **Experimental delegated limit** sits behind a red warning: a small SPL allowance with per-action and per-day caps. Revoke any time.

Scam warning

Swap review before the wallet

Three small agents, and a plan that follows the rules

Season Agent

A daily Seeker Season plan: use the phone, open one suggested dApp, sign the check-in. Optional autopilot sends 1–2 varied real actions a day as notifications. I tap, my wallet signs.

Season rules watcher

Reads Solana Mobile's own blog and SKR docs every 6 hours, keeps a quote and a link for each signal, and adapts the plan only in safe ways. Anything that means more spending waits for my OK.

Saver • Watcher

Saver: small SOL → USDC / SKR saves through Jupiter, inside my caps. Watcher: price and wallet alerts, never trades.

swap. Nothing is repeated for you.

SEASON AUTOPILOT

1–2 real actions a day, you confirm each

When on, Sol plans one or two different actions a day at random times inside your waking hours: a small swap within your limits, the daily check-in, a suggested dApp or SKR staking. When one is due you get a notification with the details; tapping it opens the review and your wallet app asks you to approve. Sol never signs for you.

Running

Real swaps are off (Agents > Swaps), so the autopilot plans no swaps.

OFFICIAL SEASON RULES

Rules updated

Summer Wrapped. What's Next on Your Seeker?

2026-09-29 · solanamobile.com · open the source

Seeker Season scoring now favors everyday wallet use and devalues activity aimed at influencing scores. The Seeker Summer campaign ended with quests across four apps, awarding SKR and badges.

WHAT THE SEASON AGENT CHANGED

• Puts everyday actions first (check-in, opening dApps), at most 2 suggestions a day

"The update gives more weight to everyday wallet use and less to activity created to influence the score."

ALSO IN THE OFFICIAL SOURCES

• Backyard Finance was one of the four apps featured in the final round quests.

"build a yield strategy in Backyard Finance"

• Nomadz joined Seeker Season with a free Suitcase NFT, a 30% XP boost, and early access to travel points.

"Nomadz has joined Seeker Season with a free Suitcase NFT, a 30% XP boost, and early access to Nomadz Travel Points for Seekers."

• MASTRpass Pro is available free in the Solana dApp Store for password and note encryption.

"MASTRpass Pro is available free in the Solana dApp

Checked. Latest official source: Summer

Rules updated

Seeker Season points are decided by Solana Mobile. This app doesn't show or promise points, and doesn't farm.

What's real, and what isn't yet

PART	STATUS	NOTE
Android app v1.1.3, public APK	live	Test signing key, not on a store yet
Secretary on a real +380 line	live	Shared demo number, anyone can call it
Sol, briefing, call actions, rules watcher	live	Cloudflare Worker + OpenAI
Mainnet wallet, balances, memo, swaps, transfers	built	Built + simulated on mainnet; reads are live
Season Agent, Saver, Watcher	built	Off by default, capped
Agent NFTs on Metaplex Core	soon	Devnet tested; mainnet not deployed
Users, revenue	none yet	Pre-launch

Every mainnet transaction type was built by the app and simulated against mainnet. Signing with real funds on a real device is the test I'm doing now. Real balance and price reads are live.

420+ Android unit/UI tests and 58 worker tests pass · Firebase Test Lab robo runs passed on phone and tablet

BUSINESS MODEL · PLANNED

Free core. Pay for what costs me money.

FREE

Core

Sol voice assistant, wallet, daily check-in, Season plan, Watcher, a few secretary calls a month to try it.

PRO · PLANNED

~\$4.99 / month, or pay in SKR

Unlimited secretary minutes, all agents, daily briefings, your own number later on.

Why charge

Phone minutes and realtime voice AI have a real cost per call. A subscription covers it.

Agent NFTs

Free and Pro (0.1 SOL) agent NFTs, once the mainnet collection opens.

Not built yet

No subscription billing exists today. Prices are a starting guess I'll test.

A phone feature, on a crypto phone

Everyone has the problem

Missed and spam calls are everyday pain for anyone with a phone, not only crypto people. The secretary is useful on day one.

Voice AI got good enough

Realtime voice models can now hold a short phone call and write a clear note. A year ago this was much harder for one person to build.

Seeker and Seed Vault

Solana has a phone with a hardware-backed wallet. MWA lets an assistant prepare a transaction and leave signing to the user.

Cheap, fast transactions

A daily check-in costs about 0.000005 SOL. Small saves and payments make sense only when fees are tiny.

Jupiter and SKR

Jupiter gives agents real swaps and prices. SKR is the native token of the Seeker ecosystem and a natural way to pay for Pro.

A reason to open the wallet

Calls, reminders and a morning briefing bring me back daily. On-chain steps ride along with that habit.

ROADMAP

What I built, and what comes next

DONE

Sep 19 → now

Grew out of the Solarchik game (Solana Mobile CLOCK IN). Rebuilt as an assistant: secretary, Sol, briefing, call actions, mainnet via MWA, three agents, rules watcher. v1.1.3.

NEXT

Mainnet NFTs

Open the Metaplex Core agent collection. Scripts are ready.

NEXT

dApp Store

Publish to the Solana dApp Store with a release key.

LATER

Own number + Pro

Your own secretary number, reminders to calendar, Pro billing in USDC / SKR.

LATER

Security

External review before agents get bigger limits. Real SKR staking numbers.

Built solo in under a month, on top of the game I made for CLOCK IN. The game is now just a small Play tile.
